

Supplementary Table 1. Information of patients who were diagnosed with malignancy

Sex/age (yr)	Pathology	History	Imaging finding	Operative finding
Female/49	GIST, high grade (T2N0)	Abdominal pain and melena for 1 month	Proximal jejunum intussusception	A 3 cm-sized polypoid tumor in jejunum as a leading point
Male/54	GIST, low grade (T2N0)	Abdominal pain for a week and melena for 3 days	Bleeding in distal jejunum or proximal ileum level, r/o AVM	A 2.5 cm-sized mass in proximal ileum
Female/57	DLBCL	Abdominal pain for 1 day	Ileocolic intussusception, focal wall thickening of transverse colon	A 3 cm-sized tumor in terminal ileum, mesenteric lymph node enlargement
Male/58	GIST, low grade (T2N0)	Abdominal pain for 1 month	A lobulated mass-like lesion in jejunal loop	A 2 cm-sized tumor in duodenum 4th portion
Male/59	GIST, high grade (T3N0)	Abdominal pain for 3 weeks, melena for 1 week	An 8.4 cm-sized mass in distal ileum and mild distension of proximal ileum	A 10 cm-sized tumor in distal ileum, with peritoneal adhesion
Female/64	CRC DC, jejunal invasion with omental seeding metastasis (T4bN1bM1)	Abdominal pain for 3 days	An inflammatory mass around proximal jejunum and descending colon, r/o actinomycosis, intestinal tuberculosis	A 7 cm-sized mass in descending colon, direct invasion to jejunum, omentum
Male/67	GIST, high grade (T4N0)	Weight loss, intermittent abdominal pain, constipation for 1 year	A 9.2 cm-sized soft tissue mass, superior aspect of bladder, r/o pelvic sarcoma	A 10 cm-sized hypervascular mass in distal jejunum, with mesenteric torsion
Female/72	DLBCL	Weight loss for 6 months, abdominal pain for 1 day	Irregular wall thickening in distal ileum and distended proximal small bowel loop	Bowel obstruction with a mass in distal ileum, mesenteric lymph node enlargement
Male/74	Undifferentiated carcinoma (T4N2)	Intermittent abdominal pain for 1 and 1/2 months	Focal wall thickening in distal jejunum and distension in proximal segment of small bowel	A 10 cm-sized mass in distal jejunum with necrotic change
Male/74	Neuroendocrine tumor, multifocal (T3N1)	Intermittent abdominal pain for 3 weeks	Abrupt luminal narrowing and wall thickening in distal ileum, distension of proximal small bowel	Conglomerate small bowel, a stenotic lesion with fibrotic change in distal ileum
Male/78	GIST, high grade (T2N0)	Abdominal pain, vomiting, and constipation for 3 days	A 3.9 cm-sized mass in distal ileum, mild distension of proximal segment of small bowel	A 5 cm-sized bleeding mass, a scanty hemoperitoneum
Male/80	DLBCL	Abdominal pain and constipation for 1 month	An 8.2 cm-sized solid mass in terminal ileum, with multiple lymph node enlargement in mesentery, aorticaval, paraaortic area	A 10 cm-sized mass in cecum, mesenteric lymph node enlargement, r/o lymphoma
Male/80	Adenocarcinoma (T4N1)	Intermittent abdominal pain, constipation for 1 month	Partial stricture in distal ileum, multiple segmental edematous wall thickening in distal to terminal ileum	Bowel obstruction with a mass in terminal ileum, multiple mesenteric lymph node enlargement
Male/88	GIST, high grade (T4N0)	Abdominal pain for 1 week	A 21 cm-sized mass with necrotic portion	A 25 cm-sized mass in terminal ileum with bladder invasion

GIST, gastrointestinal stromal tumor; r/o, rule out; AVM, arteriovenous malformation; DLBCL, diffuse large B-cell lymphoma; CRC DC, descending colon cancer.
